

Web & eCommerce Monitoring & Management

Apache® Web Server (Windows®, Unix/Linux®)

Sensor List

Lost Connection

Reads the Apache error log and warns if the number of lost connections exceeds the user-defined maximum.

Monitor Apache Variables

Compares a group of Apache status statistics with calculated historical averages and warns if the current interval values exceed the historical average by a user-defined maximum.

Process Load

Monitors the process load of the Apache server and warns if this process uses system resources in excess of the user-defined maximum.

Server Status

Checks the status of the server at each interval, and warns if the server is not responding.

URL Response

Checks the response of URLs.

URL Unreachable

Reads the Apache access log and warns if one or more URLs were unreachable during the last interval.

Website Status

Checks the status of the home page of the Web site at each interval, and warns if the server is not responding.
