Solution:	Active Directory
Versions supported:	Active Directory for Windows 2000/2003/2008 Server
Description:	The Longitude Active Directory solution proactively monitors key Active Directory performance metrics to ensure that your environment is running optimally and alerts you when there is a problem.

Rule	Description
Acd_HighDSBindingErrors	Reports high DS Binding Errors
Acd_HighDSObjectErrors	Monitors the percentage of directory store objects reported as in error due to a missing distinguished name, GUID, or relative distinguished name.
Acd_HighDSSearchErrors	Monitors the percentage of directory store searches with errors.
Acd_HighFileInstallErrors	Monitors the percentage of file replica set file installs with errors.
Acd_HighFRSBindingErrors	Monitors the percentage of failed RPC bind attempts attributed to the file replica set.
Acd_HighFRSChangeOrderAborted	Monitors the percentage of aborted file replica set change orders.
Acd_HighFRSChangeOderRetired	Monitors the percentage of retired file replica set change orders.
Acd_HighPacketErrors	Monitors the percentage of control/data packets not sent to an outbound replication partner due to some error condition.
Acd_HighFRSAuthFail	Monitors the level of File Replica Set authentication failures.
Acd_HighFRSChgOrderEvap	Monitors the percentage of evaporated file replica set change orders.
Acd_HighAuthenticationReq	Reports high authentication request rate
Acd_HighKDCReq	Reports high KDC request rate
Acd_HighSyncReqFailure	Reports high synchronization request failures
Acd_ReplicationActivity	Monitors the total inbound and outbound replication activity.
Acd_HighReplSyncGrowth	Monitors the growth of replication synchronizations in the queue.
